MotorYoke 3 – The new ultimate enhanced version of the popular MotorYoke 2 offers new electronics and added functionality. The MotorYoke 3 now has an integrated 90–260 Vac, 50/60 Hz power supply, and improved accuracy due to a continuous potentiometer, individual calibration and test menu.

Approved by the Vienna Volkstheater summer 2008, the MotorYoke 3 has since sold in great numbers, especially internationally.

Configuration and diagnostics are done by a PC, where start address and maximum speed of any MotorYoke 3 can be set remotely by connecting the DMX cable to the PC. Safety is enhanced by integral safety cable in the yoke.

The MotorYoke 3 is so silent that it is perfect for theatres and opera.

# MOTOR YOKE 3™

## lighting innovation

The MotorYoke 3 carries Source Four and Inno Four luminaires, as well as heavier equipment such as 2000/5000 W and 1,2/2,5 HMI Fresnel/PC luminaires, Parabolic Reflector luminaires and Super Beam 800 and Super Beam 1200.

The lightweight drive yoke is almost completely silent, offering the highest precision positional control and reproducibility.

It is possible to control Iris, Focus, MotorZoom and color scroller for up to 25 colours, dimmer shutters and any other functions.

Horizontal and vertical positions can be programmed into all modern lighting control systems with an accuracy of smaller than 0.1°, which is also the accuracy of reproducing the position.

Lighting Innovations MotorYoke 3 is not just for controlling spotlights, but can also be used for remote control of deflection mirrors, lasers and projectors.

The drive yoke weights only 6 kg, including a clamp for a 50–60 mm pipe.
